Overview

ABSTRACT

Syntagma is a comprehensive language acquisition ecosystem designed to bridge the gap between passive content consumption and active acquisition. The application centers on a chrome extension that helps the user create instant personalized flashcards, which then can be studied on the mobile app.

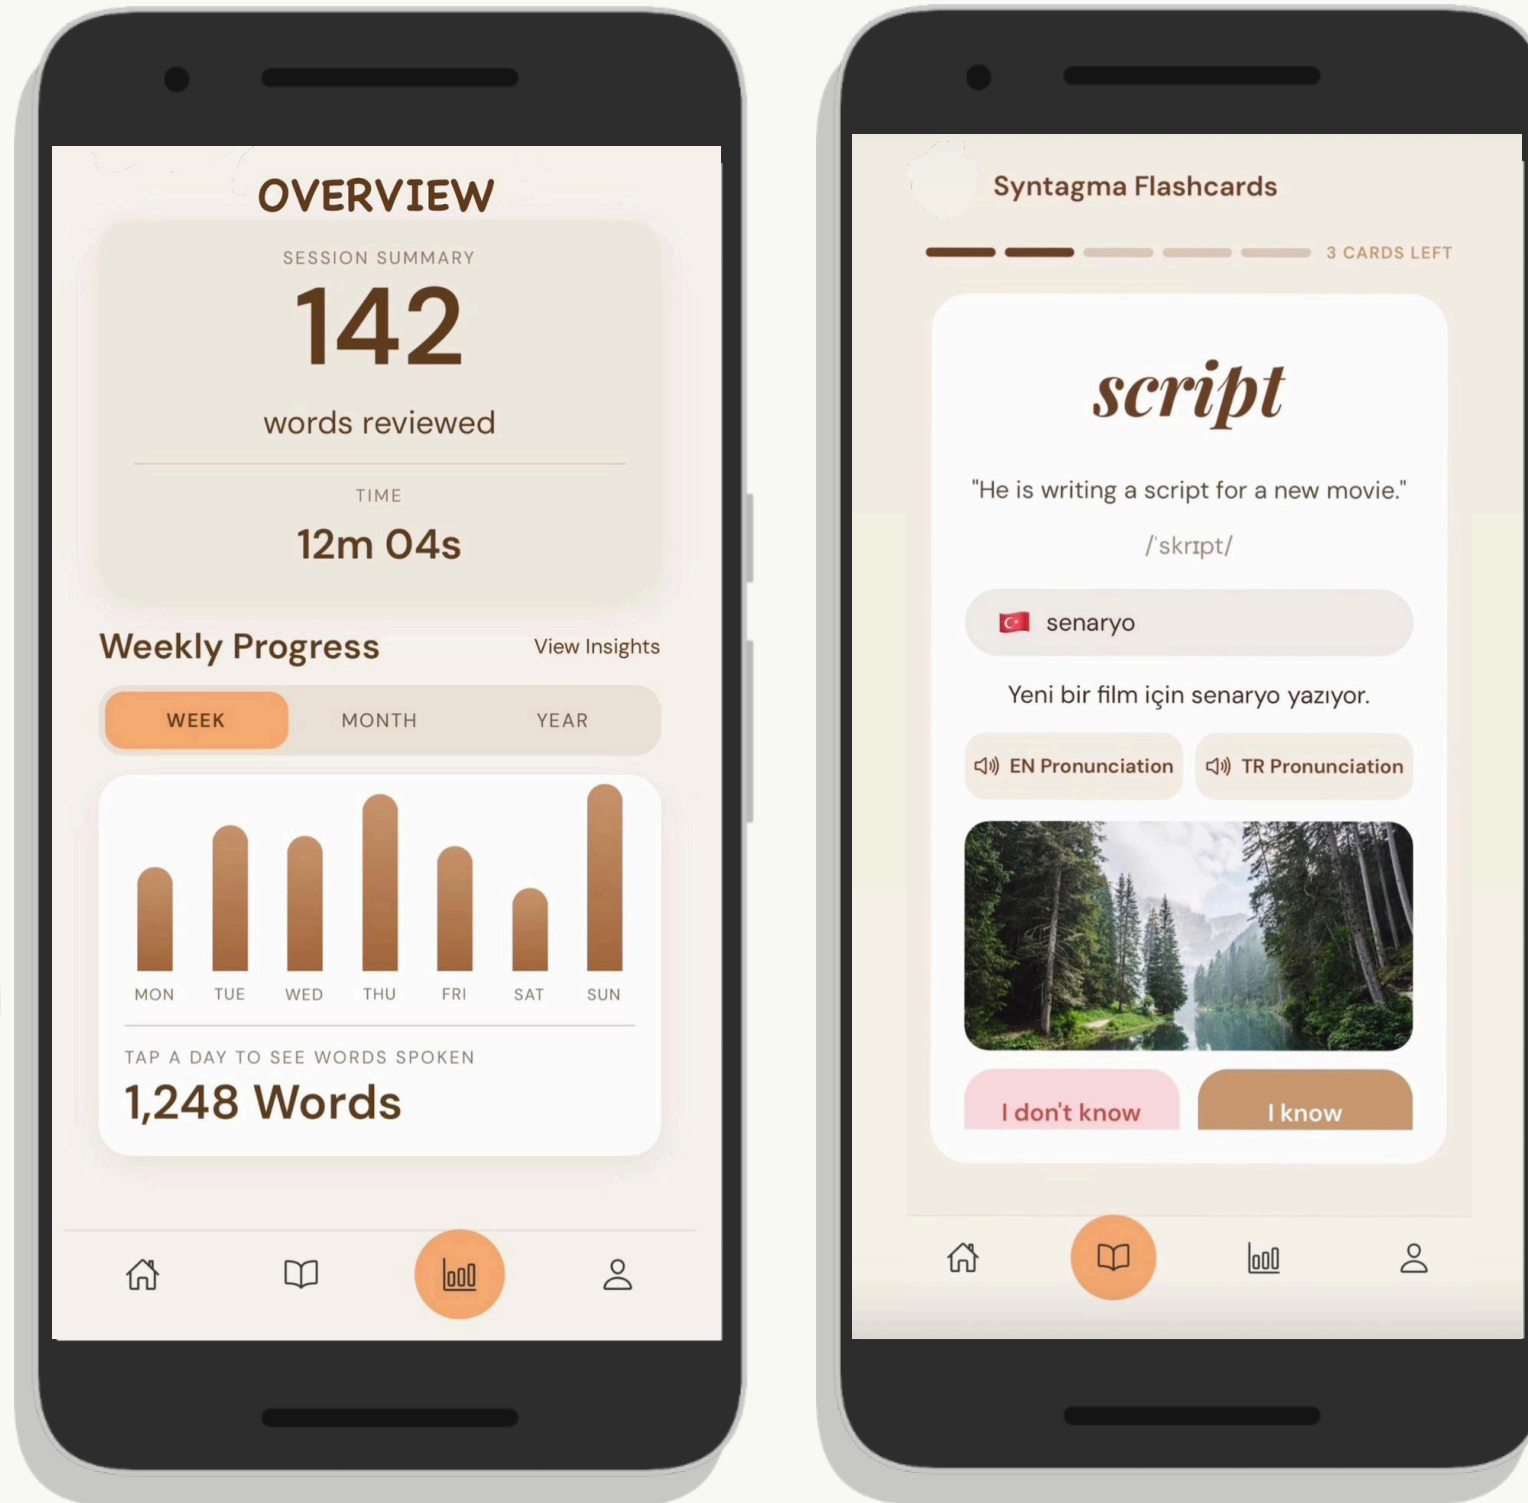

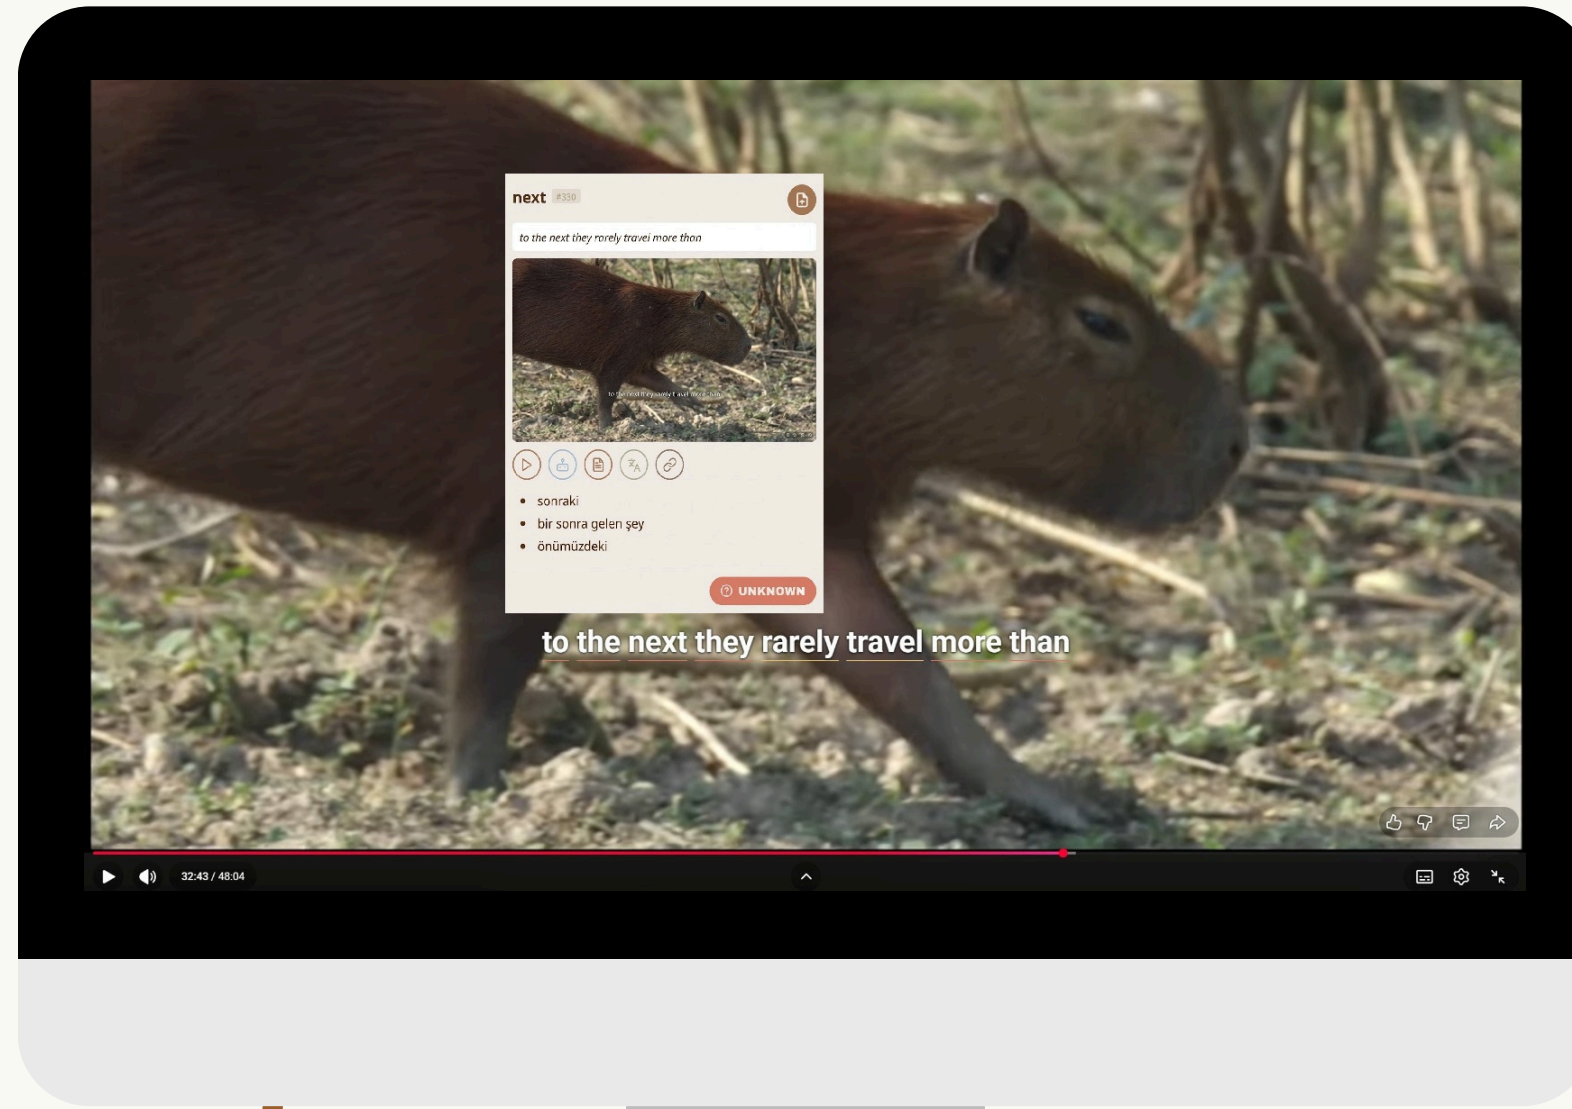

PROBLEM

Traditional language learners face an “immersion wall” where manual dictionary lookups and card creation are so time-consuming that they disrupt the flow of consuming media, often leading to burnout. This friction makes it nearly impossible to maintain a consistent habit of learning from real-world content like videos or articles.

SOLUTION

By integrating a browser-based parser with a mobile SRS application, Syntagma automates the capture of vocabulary within its original context, allowing users to build a personalized, high-retention curriculum directly from their daily media consumption.

Features

User Flow

Navigate to any English website or YouTube video; Syntagma will automatically parse the text and highlight new vocabulary.

Hover over any unknown words and instantly see the words' definition.

Click the "Plus" icon on any word to instantly save it along with its original sentence context to your personalized database.

Use the Sytagma mobile app to review your personalized flashcards.
